HAMMER MILL RM

The **Hammer Mill RM** with interaxial suction is the best in the industry for products such as cereals, grain, and flour by-products. This particular design and build allows this machine for easy use and low maintenance. With simple interchangeability of the wearing parts, this feature allows the machine to obtain very fine final product.

Technical Features:

- Helical feeder with electrical control of the feeding gate
- Screw feeder powdered by frequency converter
- Microprocessor for electronic adjustment of the feeder, to allow constant and very high efficiency of the hammer mill
- Static or self-cleaning automatic filter
- Rotary valve at cyclone discharge
- Execution in compliance with ATEX Directive 94/9EC

The **Hammer Mill RM** is available with a Helical feeder with an electrical control feeding gate or a motorized screw feeder feeding gate.
